**THE FISH SURGERY**

OPERATIONS WHICH HE PERFORMS UPON HIS PATIENTS.

Dr. David Kennedy of Kennedy's Mill, Margaretville, N. Y., has perfected small appliances for the treatment of fish, which are as follows:

1. **FIN TRIMMING**—This operation is performed by means of a pair of scissors. The fish is held firmly by the left hand while the scissors are used to trim the fin. The operation is usually done on the lower fin.

2. **TAIL TRIMMING**—This is performed by means of a pair of scissors. The fish is held firmly by the left hand while the scissors are used to trim the tail. The operation is usually done on the lower tail.

3. **SCALE REMOVAL**—This is performed by means of a small knife. The fish is held firmly by the left hand while the knife is used to remove the scales. The operation is usually done on the lower side of the fish.

4. **PINION REMOVAL**—This is performed by means of a pair of scissors. The fish is held firmly by the left hand while the scissors are used to remove the pinion. The operation is usually done on the lower side of the fish.

5. **NERVE CENTER REMOVAL**—This is performed by means of a small knife. The fish is held firmly by the left hand while the knife is used to remove the nerve center. The operation is usually done on the lower side of the fish.

6. **BLADDER REMOVAL**—This is performed by means of a pair of scissors. The fish is held firmly by the left hand while the scissors are used to remove the bladder. The operation is usually done on the lower side of the fish.

7. **OTHER OPERATIONS**—There are several other operations which Dr. Kennedy performs, such as the removal of foreign bodies, the treatment of injuries, and the like. These operations are performed by means of the appliances described above.
