Patterns of Growth

The growth of population in the United States can be divided into three periods:

1. Pre-1930:
   - Population growth was relatively slow.
   - Major factors included immigration and natural increase.

2. 1930-1960:
   - Population growth accelerated significantly.
   - Key factors were increased immigration, improving health care, and reduced infant mortality.

3. Post-1960:
   - Population growth slowed, although immigration and international migration continued.

The effects of these periods on the cultural landscape of the United States have been significant and enduring.

Never Too Big To Learn!

THINGS change a lot in a few years. New values, new concepts, changing economic conditions — a whole new industry can develop between the time you take an action and the time you receive the benefit in return.

There is no longer the definite pattern of events from the time a person signs a contract and the time they receive their benefit.

The successful businessmen and businesswoman do not wait for the perfect time to act. They do not sit around and wait for the ideal time to invest, or for the right opportunity to come along.

They take advantage of every opportunity that comes their way, even if it means taking a risk.
